Benco Sales Reassures Customers:

Methylene Chloride-Based Strippers Remain Available for Commercial Use

Crossville, TN--April 15, 2019--Benco Sales, the leader in industrial wood and metal strippers and solvents, is pleased to announce that Methylene Chloride (MCL) is not being restricted for commercial use, despite rumors to the contrary. Benco Sales has been in frequent and direct contact with the federal Environmental Protection Agency, and has confirmed that this MCL limitation is for non-commercial retail-use only. The EPA has also indicated that there are no future plans to ban the commercial use of MCL.

"Our customers' safety is our priority, so we have been working closely with the EPA on clear instructions for the safe use of MCL," explained Benco Sales president, V. Lennon. "Unfortunately, these unfounded rumors have encouraged competitors to push lesser products as an unsatisfactory solution for a regulatory problem that does not pertain to industrial and commercial use." she added.

In addition to their collaboration with the EPA, Benco Sales provides safety information on industrial strippers and solvents on their website. For more information on Benco Sales products, please visit <https://bencosales.com>.

About Benco Sales

Benco Sales has been manufacturing industrial strippers and solvents for the furniture refinishing and metal recycle/refinishing industry for more than 30 years. The company specializes in finish and coatings removers, breakdown and etching chemicals and specialized cleaners.
